

Giuseppe Profiti is a postdoctoral research fellow in bioinformatics at the University of Bologna.

He got a PhD in Computer Science in 2015, with a thesis on graph algorithms applied to the problem of protein function annotation.

Before joining the Bologna Biocomputing Group, he worked on easy to use Galaxy instances for Next Generation Sequencing data analysis for the Health Science and Technology Interdepartmental Center, and on expert systems for the Department of Economics.

He was also responsible of one computing node in the National Grid Infrastructure.
